Introduction :

ServiceNow is a cloud-based platform used for IT service management (ITSM) and business workflow automation. Organizations use it to manage incidents, requests, problems, and many other services.
This project explains how to enforce mandatory fields using UI Policies and how to migrate those changes using Update Sets.

Objectives :

- To understand the concept of UI Policies in ServiceNow.
- To enforce mandatory fields using UI Policies.
- To understand the role of Update Sets.
- To migrate configuration changes from one instance to another using Update Sets.

Enforcing Mandatory Fields Using UI Policies :

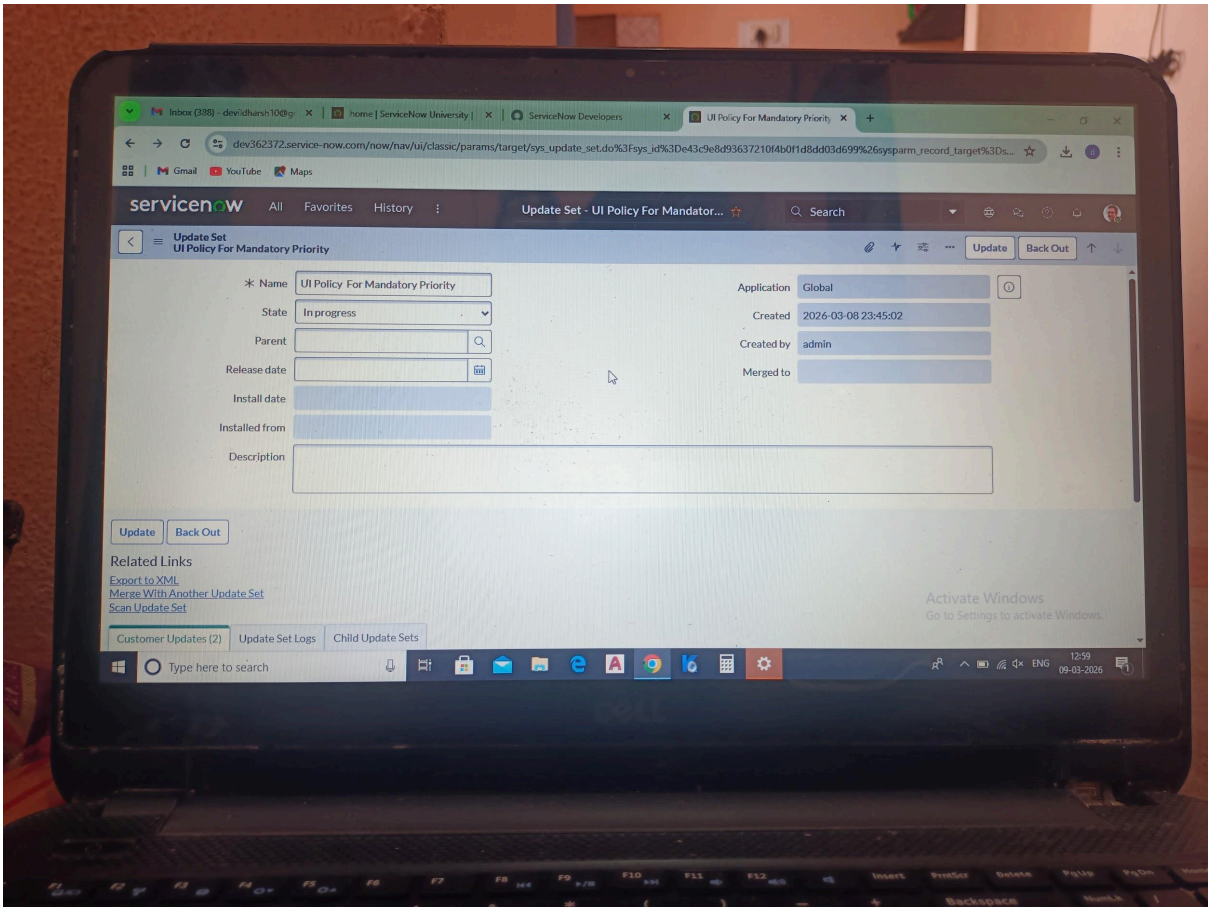
In the Incident form, the Work Notes field should become mandatory when the State is set to Resolve

Steps to Create a UI Policy :

☆Log in to the ServiceNow instance.
•Navigate to
☆System UI → UI Policies.

☆Click New.
☆Fill the UI Policy details:
•Table: Incident
•Short Description: Make Work Notes Mandatory when State is Resolved
•Condition: State = Resolved
•Save the UI Policy.
•Scroll to UI Policy Actions and click New.
•Configure the action:
•Field name: Work Notes
•Mandatory: True
•Save the record.

Now when the incident state becomes Resolved, the Work Notes field becomes mandatory.



Update Sets in ServiceNow :

An Update Set is a group of configuration changes that can be moved from one instance to another.
For example:

•Development → Testing
•Testing → Production
•Update Sets capture changes like:
•UI Policies
•Business Rules
•Client Scripts
•Form modifications

Migrating Changes Using Update Sets :

Navigate to

System Update Sets → Local Update Sets.

☆Click New.

Enter:

☆Name: Mandatory Fields UI Policy Project

☆Application: Global

☆Click Submit.

☆Set the update set as Current Update Set.

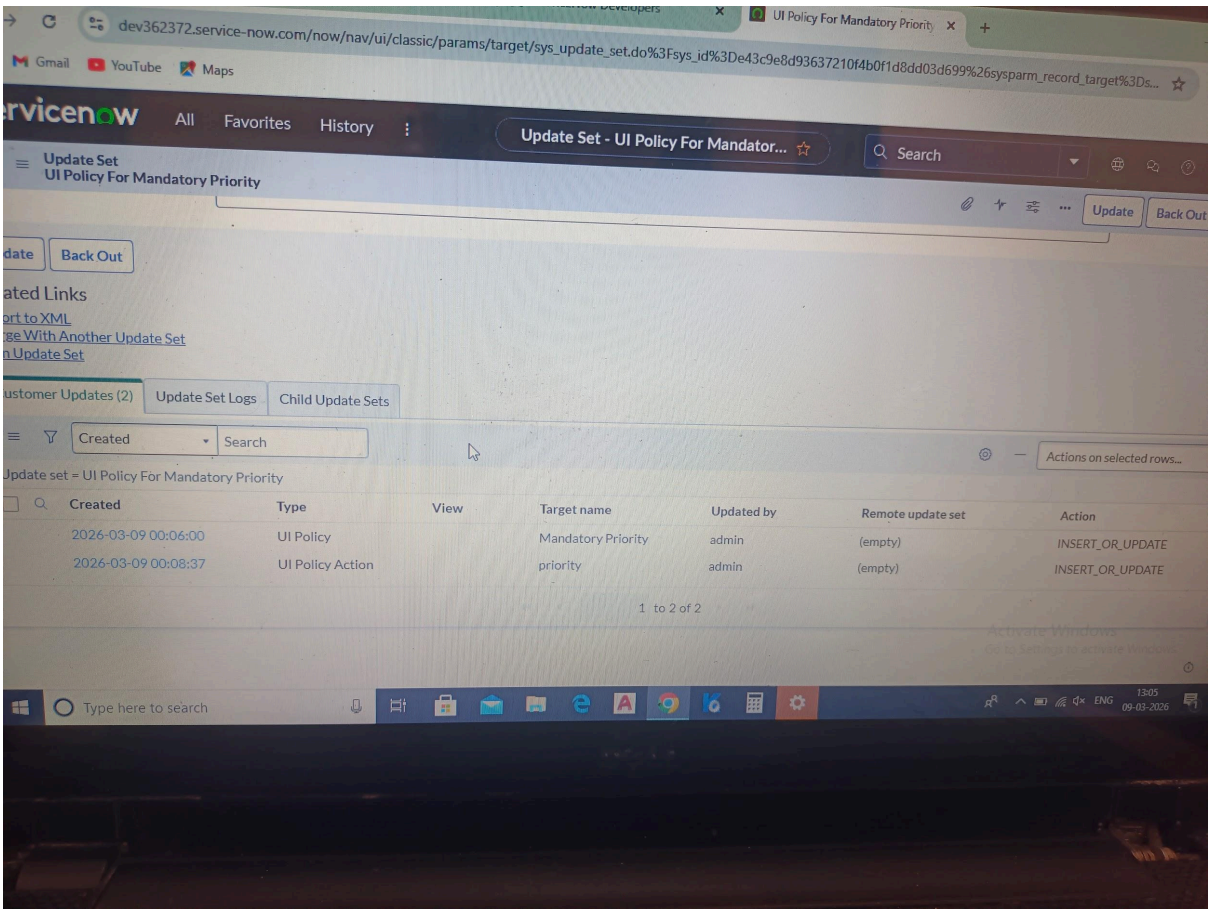
☆Now any configuration changes will be recorded in this update set.

●Steps to Complete and Export the Update Set :

☆Go to Local Update Sets.

☆Open the update set you created.

☆Click Complete.



☆Click Export to XML.

☆Download the XML file.

Steps to Import Update Set into Another Instance :

- Login to the target instance.

Navigate to
• System Update Sets → Retrieved Update Sets.

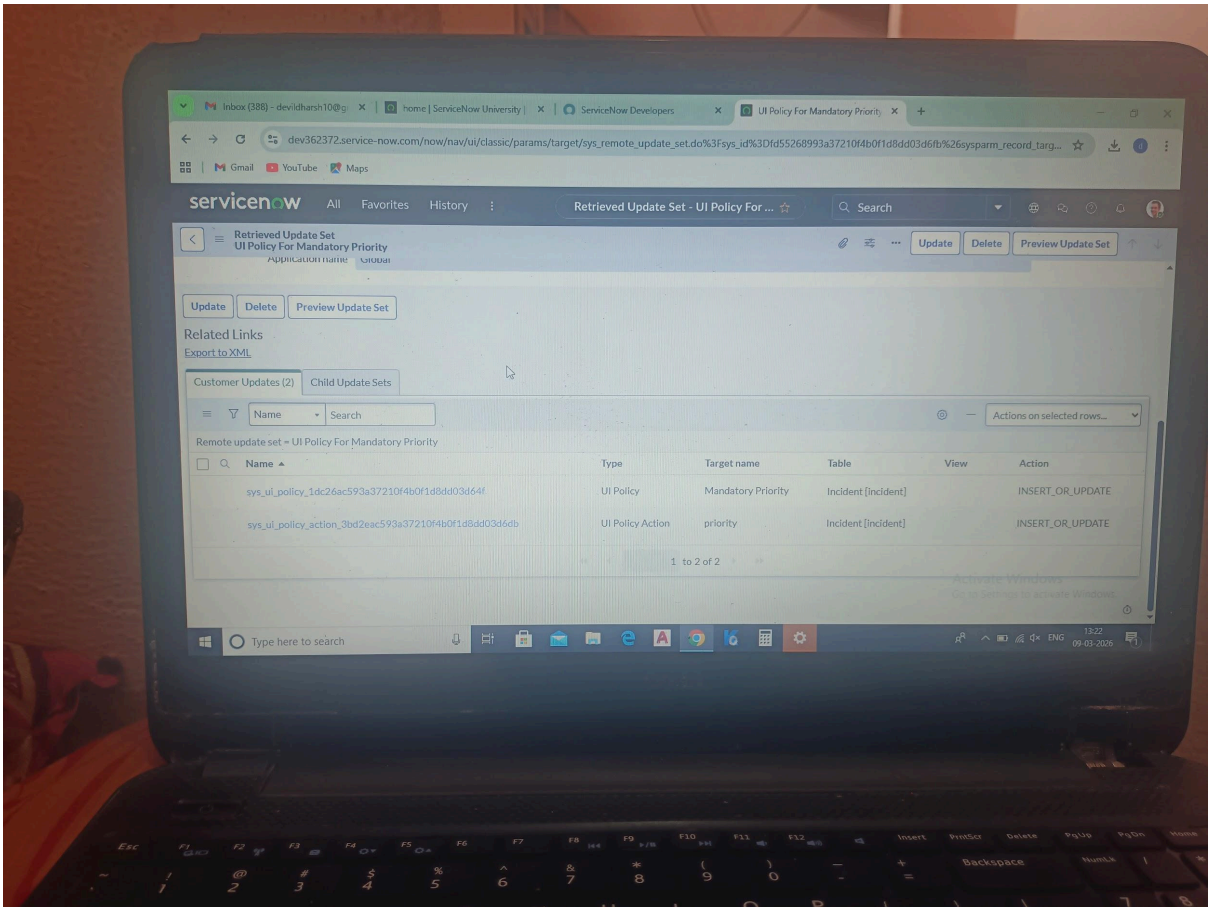
•Click Import Update Set from XML.

•Upload the XML file.

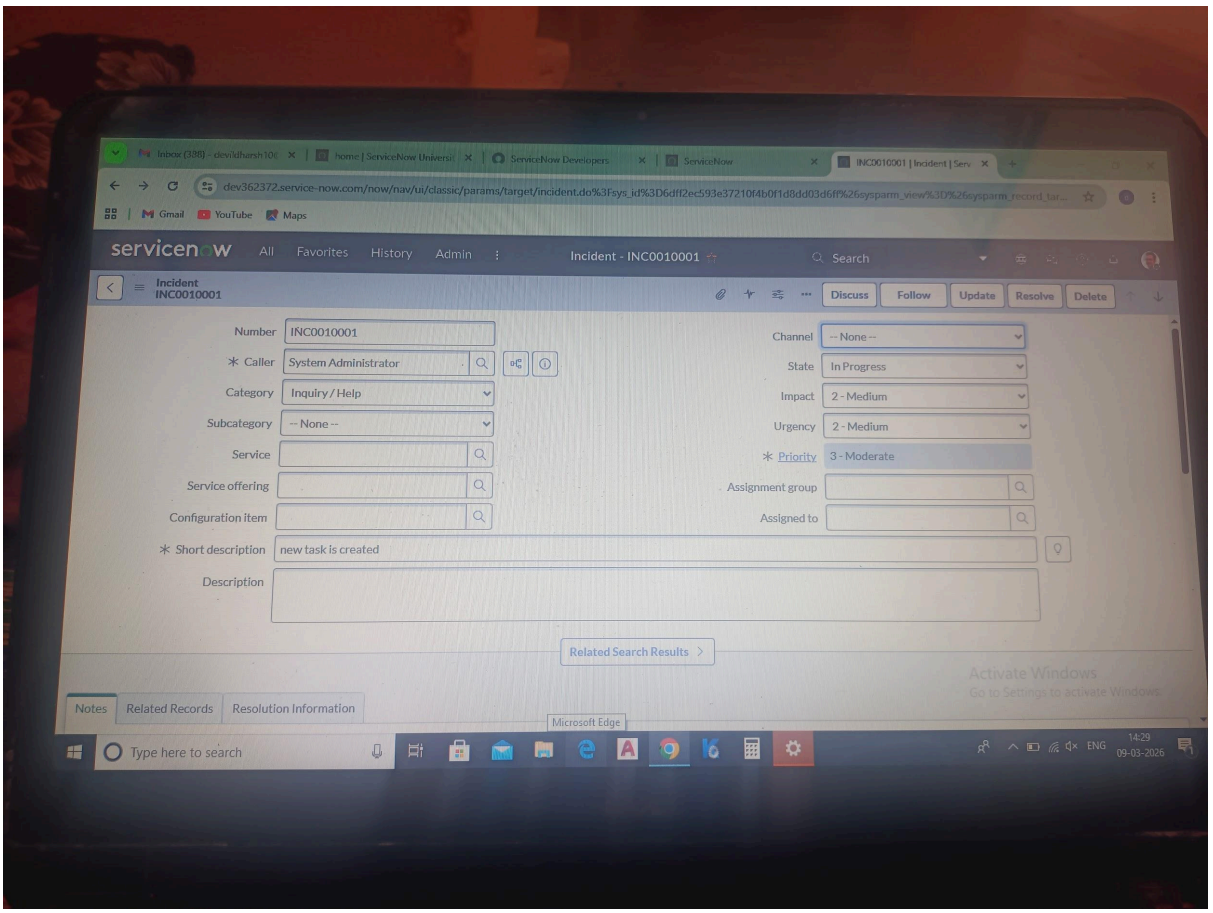
•Click Preview Update Set.

•Resolve any errors if present.

•Click Commit Update Set.



●The changes will now be applied in the new instance.



●The project was Completed successfully

Conclusion :

●UI Policies in ServiceNow provide an efficient way to control form behavior without scripting. By enforcing mandatory fields, organizations can ensure that required information is captured properly.
●Update Sets allow developers to safely move configuration changes between instances, ensuring smooth deployment and system consistency.
This project demonstrated how to create a UI Policy to enforce mandatory fields and how to migrate those changes using Update Sets.
